

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1-16 (Cancelled)

Claim 17 (new): A modular galley for an aircraft or train, comprising:
a wall;

a multiplicity of modules;

wherein the wall is provided with a multiplicity of guides running in the vertical direction with undercut slots;

wherein the multiplicity of modules is provided with runners on the rear that can be accommodated in the slots for coupling the modules to the wall by hooking the runners in the slots; and

wherein the modular galley further comprises lifting means for raising or lowering a said module, the runners of which have been accommodated in a said undercut slot past the wall.

Claim 18 (new): The modular galley according to claim 17, wherein the runners are undercut correspondingly to the slots.

Claim 19 (new): The modular galley according to claim 18, wherein the slots are widened in places such that a said undercut runner can be inserted here in the horizontal direction so as then to hook into the respective undercut slots.

Claim 20 (new): The modular galley according to claim 19, wherein the widened sections of the slots are at a height above the floor of the galley such that a modular placed on the floor in front of the slot concerned completely overlaps the widened section.

Claim 21 (new): The modular galley according to claim 17, wherein the slots, viewed in a horizontal plane, have an essentially T-shaped form with the leg of the T pointing away from the wall.

Claim 22 (new): The modular galley according to claim 17, wherein the runners are shaped like a mushroom.

Claim 23 (new): The modular galley according to claim 17, wherein the lifting means comprise a spindle that runs vertically in the wall with a lifting arm that projects from the wall and can be moved along the spindle by means of matching internal screw thread.

Claim 24 (new): The modular galley according to claim 17, further comprising locking means that are provided on the wall and on each module and interact with one another, for fixing a said modular at a specific height.

Claim 25 (new): The modular galley according to claim 24, wherein the locking means comprise a pin that is provided on the wall or the modular and can be slid in the horizontal direction as well as a pin seat provided in the module or the wall, respectively.

Claim 26 (new): The modular galley according to claim 17, wherein the wall and one or more of said modules are provided with connecting means for air, water, data exchange and/or power.

Claim 27 (new): The modular galley according to claim 17, comprising a number of vertical sections alongside one another, with, per section:

at least two of said guides with slots;
in the wall, at least one air, water and power connector; and
lifting means.

Claim 28 (new): The modular galley according to claim 17, further comprising one or more service trolleys placed underneath a said module.

Claim 29 (new): A module for a modular galley according to claim 17, the module being provided, on the rear, with undercut runners, which can be hooked in an undercut slots on a wall.

Claim 30 (new): A module in a modular galley to be secured to a wall provided with a multiplicity of guides running in the vertical direction with undercut slots, wherein the modular galley can be used in an aircraft or train and wherein the module comprises undercut runners on the rear of the module which runners can be hooked in an undercut slot on a wall.

Claim 31 (new): An aircraft having a modular galley comprising:
a wall;
a multiplicity of modules;
wherein the wall is provided with a multiplicity of guides running in the vertical direction with undercut slots;
wherein the multiplicity of modules is provided with runners on the rear that can be accommodated in the slots for coupling the modules to the wall by hooking the runners in the slots; and
wherein the modular galley further comprises lifting means for raising or lowering a said module, the runners of which have been accommodated in a said undercut slot past the wall.

Claim 32 (new): A train having a modular galley comprising:
a wall;
a multiplicity of modules;
wherein the wall is provided with a multiplicity of guides running in the vertical direction with undercut slots;

wherein the multiplicity of modules is provided with runners on the rear that can be accommodated in the slots for coupling the modules to the wall by hooking the runners in the slots; and

wherein the modular galley further comprises lifting means for raising or lowering a said module, the runners of which have been accommodated in a said undercut slot past the wall.

Claim 33 (new): The modular galley according to claim 27, further including in the wall at least one data bus.
